

INSPECTION SERVICES

NTS inspectors are licensed by the Minnesota Department of Health and will accurately identify asbestos containing materials ACM and potential hazardous materials found within the structure. Each inspection is completed in a timely manner.

Clients throughout Minnesota have used our inspection services, which include: local, state, and federal government, fire departments, commercial business, and private residences.

By identifying ACM and hazardous materials the remaining disposal material can be appropriately identified and reduce the cost. It keeps your valued employees safe and healthy.

NTS business interests are locally based in west-central and northern Minnesota with an office in Virginia. We believe in sustaining the local economies and are committed to providing exceptional science and engineering to our customers.

Our services include asbestos and hazardous material inspections; water resources evaluations; environmental and geotechnical consulting; engineering; data management; site assessment and investigation. These services are provided to agricultural, industrial, and municipal customers.

Asbestos & Hazardous Materials Inspections

Identification of regulated materials in structures prior to demolition, renovation, or burning is required by Minnesota Rules 7035.0805. More importantly, identifying these materials is important to the health and safety of workers and is required by Minnesota Statue 326.70. Finally, characterization of wastes allow for pre-approval at the appropriate landfill and manifesting prior to transportation. NTS has professional staff with training and certifications required to perform inspections interface with regulatory agencies and write bid specifications for abatement of asbestos and hazardous materials.

NTS has the ability to see the big picture and our business is built on a track record of proven success and long-term relationships. We have an in-depth understanding of the local regulatory, economic and environmental conditions through close work with local stakeholders. We can identify and address potential issues with innovation and common sense solutions.

ASBESTOS CONTAINING MATERIALS

(ACM) These materials can be found in many forms; pipe insulation, ceiling tiles, floor tiles, glues and mastics, insulations, electrical wiring, ceramics, grout and cement, exterior siding, and many other building products.

INSPECTORS are used to identify all Potential Asbestos Containing Material (PACM) and hazardous materials items existing within a structure.

PRE-DEMOLITION HAZARDOUS MATERIALS

are identified while conducting an inspection; Mercury in thermostats, hydraulic oil (PCB) found in door rams, lead batteries in exit signs, emergency lights, and many other items.

IT IS THE LAW TO REMOVE ALL ACM ITEMS.

Minn. State (326.70). It is for the safety and health of employees involved in the removal of the structure. If these items are not properly identified the whole structure will be considered ACM/hazardous material and will create more expensive disposal fees.
